

# Project 00: Linux + Git + GitHub

## Evaluation Sheet — System Environment & Version Control

Student: \_\_\_\_\_ Evaluator: \_\_\_\_\_ Date: \_\_\_\_\_

### Section 1: Terminal Navigation & Directory Hierarchy

Student navigates the Linux filesystem via CLI. Demonstrates pwd, cd, relative paths (..), and directory creation with mkdir -p. Directory hierarchy in tree\_structure.txt is accurate.

[ YES ]

[ NO ]

*Check: "Ask the student: 'What is the difference between relative and absolute paths?'"*

### Section 2: File Manipulation & Text Streams

The script manage\_files.sh runs without errors. Files are created (touch), written and appended (>, >>), displayed (cat), copied (cp), moved/renamed (mv), and deleted (rm) properly.

[ YES ]

[ NO ]

*Check: "Ask the student: 'What happens if you use > instead of >> when writing to an existing file?'"*

### Section 3: Git & GitHub Remote Setup

A local Git repository is initialized with git init. Files are staged with git add and committed with meaningful messages. The project is pushed to a valid public GitHub repository.

[ YES ]

[ NO ]

*Check: "Ask the student to explain: Working Directory vs Staging Area vs Repository."*

### Section 4: Documentation & Daily Workflow

A clear README.md is present on GitHub explaining the project. It includes a dedicated section explaining why Git makes development easier in the student's own words. Student demonstrates the edit-add-commit-push cycle live.

[ YES ]

[ NO ]

*Check: "Does the student demonstrate genuine understanding without blindly reading notes?"*

### Section 5: Bonus: SSH Key Authentication [BONUS]

An ed25519 SSH key was generated, the public key was added to GitHub, and the remote URL was switched to SSH (git@github.com:...). Pushes succeed without typing passwords.

[ YES ]

[ NO ]

*Check: "Which key is public and which is private? Why must private keys never be shared?"*

### Summary & Final Result:

All 4 mandatory sections must be YES to PASS.

### RESULT:

[ ] PASS [ ] FAIL

### Signature:
